Leaf roller in mulberry has become a serious pest in several of the mulberry gardens in Kolar and Bangarpet taluks. A group of progressive sericulturists across the district were called for discussing the problems associated with sericulture with special reference to the leaf roller at Kuppana halli Sericulture Hall on 8th November 2019. Dr. A.N Shylesha, Dr. Shivalinga swamy of ICAR - NBAIR participated in the discussion and suggested that, Trichogramma Egg parasitoids was best for management of leaf folders if adopted across the fields and in a community basis. The farmers wanted the parasitoids to be supplied to them. The department was told to start bio control unit so that they can cater to the needs of the sericulturists in that area. In addition several problems regarding chaki rearing of silkworm and maintenance of silkworm and silkworm rearing houses were addressed by the specialist - sericulture officers. The meeting ended with vote of thanks.
